

*Enchiridion Arithmeticon*

OR

A MANVEL OF MILLIONS

Containing therein

MENS ACCOMPT

READY COMPTED,

OR MADE VP.

WHEREBY THEY MAY SVDDENLY

know the true value of any commodity  
at any price whatsoever.

*And how to resolve many Millions of Questions, either  
Reduction, or the Golden-Rule, without any use  
of Multiplication or Division.*

In so plain a maner that an ordinary capacity may easily  
ceive, and after such an infallible way, as no  
doubt can (justly) be made thereof.

*For Ease and Expedition the like hath not bin published.*

---

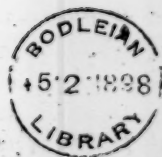

The Time is short. 1. Cor. 7. 29.

Redeem the Time. Ephes. 5. 16.

---

L O N D O N,

Printed by M. Fisher, and are to be sold in London  
the Cloffe, neare St. Mary Overie Church, at the  
house of Richard Hodges a Schoole-master,  
at the Golden-Anchor, West of St. Dunstons Church.

TO ALL SVCH AS  
DEAL IN ACCOMPTS,

who are desirous to improve their  
short time to the best advantage,  
the Authour wisheth all  
furtherance.

 Onsidering (Christian Reader) how  
short our time is, what great cause  
have we to spare as much thereof as  
possibly wee may from our worldly employ-  
ments, to the end we may more freely employ  
our selves in the use of all holy meanes, for the  
examining of our deceitfull hearts, and the  
casting up of our spirituall accompts, (so as  
thereby we may gain the peace of a good con-  
science, and the assurance of eternall life) and  
the rather, because there is not onely a neces-  
sity lies upon us for the doing of it, but also  
the work is so great, and the hindrances there-  
of are so many, that when we have done our  
best we are but unprofitable servants? As a  
speciall help for the sparing of much time  
(which may be a great furtherance thereunto)  
I doe present unto thee this little Booke, con-  
taining

*To all such as deal in Accompts.*

taining therein all sorts of sums, so truly cast up, and after so plain a maner, that thou maist suddenly know thereby the true value of any commodity at any price whatsoever, and how to resolve multitudes of difficult questions (which are necessary to be knowne) without any use of Multiplication or Division, after such an infallible way (in divers plain and familiar examples, which I refer thee unto at the end of the Book) as may give thee sufficient satisfaction to beleieve the truth thereof; also whosoever thou beest that art ingenious, if thou diligently perusest this Book (forasmuch as all the summes thereof are set downe after such a decimall maner, as the like hath not bin done before by any) thou maist plainly perceive that it is far more usefull than may conveniently be exprest in writing. Furthermore, (Christian Reader) whereas I promised long since to publish such a Book as might bee a speciall help for the true reading and writing of English (whereof so many thousands are ignorant) I give thee to understand that I purpose (so soon as I shal have a fit opportunity) to make good my promise. In the mean time commending this work (wherein I have taken no small pains) to the blessing of God and thy favourable acceptation, I rest

Thine in any farther service (for Christ)  
to be commanded

RICHARD HODGES.

## In laudem Authoris & Operis.

**I**F to Admire were to Commend thy worth,  
Thy pains should ne'er need praise to sit thee forth;  
But since I know for praise thou dost not looke,  
My Muse sends her Encomiums to thy Booke,  
And tells the Reader that th' Epitome  
Of the whole Art is here extract by thee:  
True is the Title then, & it may well  
Be call'd of Millions a Manuell:  
I wish that Millions may by this reape gaines,  
And then th' art paid for thy industrious paines:  
So may these former profits drine thee on  
To frame some second Enchiridion.

FRANCISCVS OWEN Philomedic.

---

## To the Author.

**T**Hy first was wrote for Childrē, this for Men,  
Both glean the gains frō thy industrious Pen:  
That taught the learner, this the learned teacheth,  
And to each weakeſt apprehension reacheth:  
Thou haſt a third I heare; why let'ſt it lye?  
Will women teach exact Orthographie?  
Send it likewiſe into the World, and ſo  
Both Fathers, Mothers Children teach to know.

M. I. Philomathematic.

S. P. D. Authori.

**H**ence Criticks hence, this booke makes no account  
 Of your wide censures; for they doe surmount  
 All number: and besides, the Authors pain  
 Soly desires the Courteous Readers gain.  
 A Mannell'tis but styl'd; yet comprehends  
 Millions of profits for his worthy friends,  
 And whosoe're thy Treatise takes in hand  
 By such direction (Hodges) may command  
 Thousands, thereby enriching learnings store,  
 Sooner by farre then he that writeth more.  
 No farther praise thou need'st; this Enchiridion  
 Henceforth will vindicate thee from oblivion.

G. I. Philomus.

# THE READERS DIRECTIONS.

Need not (Christian Reader) to give thee any Directions for the finding out of the severall Prices which are conteined in the Tables of this Booke, for as much as they are set down at the head of every Page (wherein they are) after such an orderly manner, as that they may fitly serve for most plain Directions themselves.

Every severall Page wherein the Tables are, doth contain two Columnes, the greater of them (towards the left hand) by adding ~~one~~ or more summs together, will shew the true value of any number of that price which stands at the head of the Page. The lesser Columnne is chiefly appointed to shew the true value of any number of the great Hundred weights, at the same price also, which stands at the head of the Page.

The figures which stand at the left side of each Page, from 1. to 9000, doe serve as Directours for the finding out the true value of any number in either Columnne; for all the Prices of the great Hundreds which are in the lesser Columnne, doe stand right against the Prices of the Hundreds that are in the other Columnne, so as the one may easily be found by the other.

As for example.

If you would suddenly know at three farthings the  
pound,

### *The Readers*

pound, what 300. pounds futtle (at five score to the Hundred) are worth, and at the same price, what 300 great (at 112 to the Hundred) are worth, you are to turn to the Table of three farthings, and to looke on the left side of that Page amongst the directing figures for 300, and it wil shew you in the same Columnne that 300 futtle are worth 18 s. 9 d. and in the next Columnne in the sum right against it, that 300 great are worth 1 l. 1 s. (Where also you may observe that 300 great is 336 pound futtle, and so in all the rest of the great Hundreds, you may perceive how many pounds of the futtle weight, are contained in them.)

Or suppose you were to know at three farthings the pound, the true value of 19. hundred weight, then you are to looke amongst your Directing figures, for 1000. and the sum which stands right against it, in the second Columnne, is the true value thereof; next, you are to look for 900. and the sum which stands against it, in the second Columnne is, 3. l. 3. s. the which two sums being added together, do make 6. l. 13. s. which is the true value of 19. Hundred weight, at 3. farthings the pound.

Also if you would know, at 3. farthings the pound, what are any of the parts of the Hundred weight, then you are to look at the foot of the same Columnne wherein the Hundred weights are, where you may see, 56. to shew you the price of the half Hundred, 28. the Quarter, and 14. the half quarter.

At the foot of this Table of 3. farthings (in the greater Columnne) and so in all the other Tables of all Prices, are placed these Directing figures, namely, 120. 144. 252. 365 which are of great use, for the resolving (at once) of many necessary questions.

As for example.

If one Ell cost 3. farthings, what will 120. Els cost?

If one of any Commodity do cost 3. farthings, what will 144. cost? which is a dozen dozen, or a great gross?

If

### *Directions.*

If 3. farthings begained in one Gallon of wine, or oile, what is gained in 252. Gallons. which are the Gallons of a Tun?

If one Daies expence be three farthings, what are the expences of 365. Daies, which are the Daies of a yeare?

But some will say, they desire not so much to know, If one gallon or pound cost so much what cost the Tun, or the Hundred weight, as to know if one Tun, or Hundred weight cost so much, what cost the Gallon or the Pound? To this I answer, that the Book will shew aswell the one, as the other.

### *As for example.*

If one Tun of Wine, or Oile, doe cost 20. l. what cost the Gallon? to resolve this Question, you are to turne over your Book to the Table of 19. pence, & at the foot of the first Columnne therein, right against 252. you may see 19. l. 19. s. which is the nearest sum to it, as possible may be found; whereby you may perceive, that 19. l. the Tun, is 19. d. the Gallon; and a shilling over in the price of the whole Tun.

Also, if one thousand weight of Sugar, (containing 1120. Pounds of theuttle weight) doe cost 88. l. 14. s. What cost the pound? To resolve this Question, you are to look also in the Table of 19. pence, amongst your Directing figures (on the left side thereof) for 1000. & that will shew you in the lesser Columnne right against it, that 1120. pounds shuttle, or 1000. weight is, 88. l. 13. s. 4. d. which is the nearest sum to it, as possibly may be found, whereby you may perceive, that if a thousand weight of Suggar doe cost, 88. l. 14. s. the price of one pound is. 19. d. and 8. d. over in the thousand weight.

Or if it be needfull to know at 19. d. the pound, What cost the ounce? then you are to looke in the first Table of the Book, amongst your Directing figures (on the left side thereof) for 10. and 9. and the sums which stand right against these two, being added together, will shew that,

if

## *The Readers*

if one pound of Sugar cost 19.d, the ounce is worth peny-half farthing, and one sixteenth, part of a peny : the like may be done for any other price; forasmuch as the Table containeth therein the 16<sup>th</sup>. parts of any nūber of pence.

Or suppose you would know, at 30. pence, or 2. s. 6. d. the pound, for theuttle weight, (containing 12. ounces) what one ounce thereof is worth, the you are to turne to the Table of the 12<sup>th</sup>. parts of pence, and (at the left side thereof) amongst your Directing figures therein, to look for 30. and that will shew you, that if one pound of theuttle weight doe cost 30.d or 2. s 6.d; the ounce is worth 2. d. ob. the like you may suddenly know thereby, if the pound bee at any other Price, what is the true value of one ounce thereof, (forasmuch as the Table containeth the twelfth parts of any number of pence) the which being knowne, you may easily perceiue what is the price of diuerse ounces.

Also, forasmuch as the Booke containeth therein all the even parts, either of pounds, shillings or pence, it is of such singular use, as that I am not able to give sufficient expressions thereof: some few examples doe here follow.

Six Merchants having adventured together 7000. l. and gaining 500. l. to know each mans share, you are to turne over the Book to the Table of 3. s. 4. d. (wherein are contained the sixt parts of any number of Pounds,) and to looke amongst your Directing figures, for 500. and it will shew you that the sixt part of 500. l. is 83. l. 6. s. 8. d. which is the share that each man must haue.

Or thus, Five Souldiers having obtained a Prize worth 78. l. to know what each mans share is, you are to turne to the Table of 4. s. (wherin are contained the fift parts of any number of Pounds) and to looke amongst your Directing figures, for 70. & 8. and they will shew you in the sums right against them being added together, that each souldier is to receiue for his share 15. l. 12. s.

Suppose

### *Directions.*

Suppose also that a Souldier were to receive 8. pence a Day, for 8: weeks, allowing 7. daies to the weeke, which makes in all 56. daies, what will his pay amount unto: for the resolving hereof you are to turn to the Table of 8. pence, and at the foot of the lesser Column therein, you shall find that 56. 8. pences, are 1. l. 17. s. 4. d. which is the Pay that he is to receive.

Or if 600. Men were to receive the like pay for the same time, then you are to turne to the Table of 17. s. & to looke amongst your Directing figures therein, for 600. and it will shew you that 600. times 17. s. is 510. l. next you are to turne to the Table of 4. Pences, and to looke there also for 600. 4. pences, which you shall find to bee 10. l. As for the 1. l. you need not to looke in the Booke for to find what it is, for 600. times 1. l. sheweth it self to be 600. l. these three sums being added together, will shew that 600. mens pay for 8. weeks allowing 7. daies to every weeke is 1120. l.

If 1. Yard of Broad cloth cost 13. s. 4. d. What cost 850? To resolve this Question, you are to turne to the Table of 13. s. 4. d. and to looke amongst you Directing figures therein, for 800. & 50. and the sums, which stand right against these two being added together, will shew that 850. yards at 13. s. 4. d. the yard is 566. l. 13. s. 4. d.

If one Ell of Holland cost 6. s. 8. d. What cost 150? To resolve this Question, you are to turne to the Table of 6. s. 8. d. and to looke therein amongst your Directing figures, for 100. and 50. and the sums which stand right against these two being added together, will shew that 150. Els of Holland at 6. s. 8. d. the ell are worth 50. l.

If one ounce of silver cost 5 s. 9. d. ob. q. What cost 870 ounces? To resolve this Question, you are to turne to the Table of 5. s. and to looke therein amongst your Directing figures, for 800. and 70. and the sums which stand right against these two, being added together, will make 217 l. 10 s. next you are to turne to the Table of 9. d. ob. q. and to look therein amongst your Directing figures, for 800. and 70. and the sums which stand right against these

## *The Readers*

two (in the same Columnne) being added together, will make 35. l. 6. s. 10. d. ob. the which sum being added to the former sum, which is 217. l. 10. s. it will appeare that 870. ounces of silver at 5. s. 9. d. ob. q. the ounce are worth 252. l. 16. s. 10. d. ob.

But it may bee objected ; unlesse men knew, how to proove by some Rule, whether such Questions as these are truly answered : What credit is to bee given unto them? Where to I answer, and withall confesse, that those Questions which are truly wrought, by the Art of Arithmetick ; are not to bee allowed for truths ; unlesse the worker be also able by the same Art, to proove how they are true.

I will therefore shew such an infallible way, how to proove any Question in the Booke to be truly answered as that none shall have any just cause to doubt thereof.

As for example.

If you turn to the Table of 23. d. ob. q. and would know thereby what 1000. Els are worth at the same price, you are to look therein amongst your Directing figures, for 1000. and it will shew you in the same Columnne, that 1000. Els at 23. d. ob. q. the Ell, are worth, 98. l. 19. s. 2. d.

That you may know whether this sum be truly cast up, or not, you are to consider what with 23. d. ob. q. will make 2. s. which you may easily perceive to be one farthing, from thence, you may safely conclude, that if one farthing being added to 23. d. ob. q. will make 2. s. then as truly will 1000. farthings being added to 1000. 23. d. 3 farthings, make 1000. times 2. s. If you add therefore 1000. farthings (which you may perceive in the Table of farthings to bee 1. l. 10. d.) to the former sum, 98. l. 19. s. 2. d. you shall find it to be an Hundred pound. Whereby you may plainly perceive by the Table of 2. s. which followeth, that your sum is truly cast up.

I will also make it plaine in another example.

Suppose you were to know what 365. Els at 23. d. ob. q. are worth, then you are to looke in the Table afore named

### *Directions.*

med at the foot thereof, for 365. which will shew you (in the same Columnne) in the sum which stands right against it, that 365. Els at 23. d. ob. q. the Ell, are worth 36. l. 2. s. 4. d. ob. q.

To proove that this sum is also truly cast up, You are to look in the Table of farthings, for 365. farthings, which is 7. s. 7. d. q. the which you are to adde to the former sum, which is 36. l. 2. s. 4. d. ob. q. and it will be in all, 36. l. 10. s. whereby you may know in the Table of 2. s. next following, that your sum is truly cast up. Because it is agreeable therunto, for 365. times 2. s. is 36. l. 10. s. as the former sum was. According to this manner, you may proove whether any other sum be truly cast up or not.

And to the end, that none might be deceived by relying upon this Booke, I have also again very diligently (since the Printing thereof) revised every sum therein, and amended with my Pen (though it be troublesome so to do) all the faults which have escaped in Printing.

If one piece of Mony, or Merchandize be worth 18. d. ob. you may know in the table of 18. d. ob. what any number are worth.

Or if one piece of Money, or Merchandize be worth 6. s. in the Table of 6. s. you may know what any number are worth.

Or if one piece of Mony, or Merchandise be worth, 12. s. the Table of 12. s. will shew you what any number are worth.

By answering such Questions as these are, you may perceiv also that the Booke is very usefull for the reducing of forrein Coine into our owne, so as thereby to know the true value of the one by the other.

I have also set downe most plaine and easie Tables, for Interest, howbe it I take not upon me hereby, to shew how lawfull it is to lend in this kinde. I onely shew to all such to whom it may concerne, what is the true Interest of any sum at eight in the Hundred, for any time, from

*The Readers Directions.*

from a Yeare to a Day) and meddle no farther.

I could also, (if the charge had not bin so great in Printing) have set downe as plainly, the true Interest of any sum, either, at 5. 8. or 7. in the Hundred.

I give thee also to understand (Christian Reader) that this Booke is for so many Mens occasions, of such singular use, as that it would require a larger Discourse for the explication thereof, Nowbeit forasmuch as I am enforced (by reason of charge) to confine my Directiōs within so narrow a roomie; I must here abruptly leave off.

Hoping nevertheless, that all such as are ingenious, will easily perceive (of themselves) that the Booke is far more usefull than I have here exprest in writing. And now againe commending it to the Blessing of God, and thy favourable acceptation I rest

Thine, in any farther service (for Christ) to bee  
commanded,

RICHARD HODGES.

**A Table, whereby any one may suddenly knowe (without any use of Multiplication, save onely by adding a cipher, or ciphers, to the sums contained therein,) how many 4 pences, 2 pences, pence, half-pence, farthings, half-farthings, or quarter farthings, are contained in any number of shillings, or pounds whatsoever?**

* 20 contains	60	120	240	480	960	1920	3840

By adding one cipher to any number, you may increase the value thereof 10 times, by adding two, 100 times, by adding three, 1000 times, by adding four, 10000 times, &c. As for example, if you add a cipher to 48, which is the number of farthings that are in one shilling, you may perceive thereby, the farthings that are in 10 shillings, if you add 2 ciphers to 48, you may knowe the farthings which are in 100 shillings, &c.

You may know the first part of any sum whatsoever (having a cipher in the first place) by cutting off the first cipher, and doubling the sum.

Such plain Directions, whereby any one may readily knowe, by the Tables of Interest (which are in the Book that is called *Exhibition Arithmeticon*, or A Manual of Millions) at 8. p Cent. what is the true Interest of any sum, either at 7.l. 10.s. 7.l. 6.l. 13.s. 4.d. 6.l. 10.s. 6.l. or 5.l. 10.s. for any Time, from a Yeer to a Day.

For 7.l. 10.s. { From pounds, you are to subtract so many 15. pences, as your number of pounds are.  
From shillings, so many 3. farthings, as your number of shillings are.  
From pence, so many quarter farthings, as your number of pence are.

For 7.l. { From pounds, subtract so many times 1.s. 6.d. as your number of pounds are.  
From shillings, so many 3. half pences, as your number of shillings are.  
From pence, so many half farthings, as your number of pence are.

For 6.l. 13.s. 4.d. { From pounds, subtract so many times 3.s. 4.d. as your number of pounds are.  
From shillings, so many 2. pences, as your number of shillings are.  
From pence, so many six parts of pence, as your number of pence are.

For 6.l. 10.s. { From pounds, subtract so many times 3.s. 9.d. as your number of pounds are.  
From shillings, so many 2.d. farthings, as your number of shillings are.  
From pence, so many half farthings, and quarter farthings, as your number of pence are.

For 6.l. { From pounds, subtract so many times 5.s. as your number of pounds are.  
From shillings, so many 3. pences, as your number of shillings are.  
From pence, so many farthings, as your number of pence are.

From pounds, subtract so many times 6.s. 3.d. as  
 your number of pounds are.  
 For 5.l. From shillings, so many 3.d. 3. farthings, as your  
 10.s. number of shillings are.  
 From pence, so many farthings, & quarter farthings,  
 as your number of pence are.

Also, by those Tables in the Book, which do serve  
 for the prices of commodities (which were not in-  
 tended for Interest) you may more readily know, the  
 true Interest of any sum, for any number of months,  
 either at 5.l. or 10.l. p Cent, than by any other Book  
 whatsoever; As for example, If you would suddenly  
 knowe, the true Interest of any sum, at 5.l. p Cent  
 for a year, or 12. Moneths, you are to turn to the Ta-  
 ble of 12 d. and to invert the order thereof, by rea-  
 ding the Directing figures which are at the left side  
 thereof, as signifying the like number of pounds, and  
 the sums which stand right against them, for their  
 Interest; If for 11. Moneths, you are to turn to the  
 table of 11.d. (doing as aforesaid) If for 10 months,  
 to the Table of 10.d. If for 9. Moneths, to the Table  
 of 9.d. If for 8. Moneths, to the Table of 8.d. If for  
 7. Moneths, to the Table of 7.d. If for 6. Moneths, to  
 the Table of 6.d. If for 5. Moneths, to the Table of  
 5.d. If for 4. Moneths, to the Table of 4.d. If for 3.  
 Moneths, to the Table of 3.d. If for 2. Moneths, to  
 the Table of 2.d. If for 1. Moneth, to the Table of a  
 peny.

In like maner, If you would knowe the true Inte-  
 rest of any sum, at 10.l. p Cent for 12. Moneths, you  
 are to turn to the Table of 2.s. If for 11. Moneths, to  
 the Table of 22.d. If for 10. Moneths, to the Table  
 of 20.d. If for 9. Moneths, to the Table of 18.d. If for  
 8. Moneths, to the Table of 16.d. If for 7. Moneths,  
 to the Table of 14.d. If for 6. Moneths, to the Table  
 of 12.d. If for 5. Moneths, to the Table of 10.d. If for  
 4. Moneths, to the Table of 8.d. If for 3. Moneths, to  
 the Table of 6.d. If for 2. Moneths, to the Table of  
 4.d. If for 1. Moneth, to the Table of 2.d.

## *The Readers directions.*

Also, you are given to understand, that the Tables of Interest at 8. p Cent' (which were chiefly intended for Pounds) will suddenly shew the true Interest of any number of Marks, Angels, Nobles, Crowns, halfe Nobles, or 20. pences, at 8. p Cent' for a year. As for example, the Table for 8 Months at 8. p Cent. for li (if you invert the order thereof, by reading the directing figures, which are at the left side thereof, as signifying so many Marks) will suddenly shew, the true Interest of any number of Marks, at 8. p Cent' for a year. The Table for 6 Moneths, will suddenly shew the true Interest of any number of Angels for a year. The Table for 4. Moneths will suddenly shew, the true Interest of any number of Nobles for a year. The Table for 3. Months will suddenly shew, the true Interest, of any number of Crowns for a year. The Table for 2. Moneths, will suddenly shew the true Interest of any number of halfe-Nobles for a year. The Table for 1. Moneth will suddenly shew, the true Interest of any number of 20. pences for a year.

You are also given to understand, that the Tables in the Booke (for the prices of commodities) they serve not onely for Multiplication) but they are aswell of singular use for Division; As for example, If you would suddenly know, the halfe of any number of Pounds, you are to turne to the like number of 10.s. If the third part of any number of pounds, to the like number of 6.s.8.d. If the fourth part, to the like number of 5. s. If the fift part, to the like number of 4.s. If the sixt part, to the like number of 3.s.4.d. If the seventh part, to the like number of the seventh parts of shillings (having first reduc't your pounds into shillings) If the eighth part, to the like number of 2.s.6.d. If the ninth part, to the like number of the 9th. parts of shillings; having first reduc't your pounds into shillings, which you may suddenly doe, by doubling your number of pounds, and adding one cipher thereto; As for example, If you would know how many shillings are in 34.l. you need but onely to double 34. and to adde one cipher thereto, and then it will appeare, that 680. shillings are contained in 34.l. &c.

If 336. 14.d. 3.farthings. or 20 li. 13.s. be the price of 236 Gallons, then by the same reason 336. quarter farthings, or 21. pence, must be the price of one Gallon; forasmuch as one quarter farthing is the 236. part of 14.d.3.farthings, &c.

105. Ells,

(Which are the number of Ells, in a piece of Doulas, or Loerā) of all prices whatsoever, from the 32th. part of a farthing, to 3 s. 4 d. the Ell; whereby any one may suddenly know, at any price the Ell, what is the price of the whole piece; or at any price the whole piece, what is the price of one Ell.

If one Flemish auln do cost 12 d. one English yard will cost 16 d. one English ell will cost 20 d. and one French auln will cost 24 d. or 2 shillings; Or thus, by the same reason, If 700 Flemish aulns doe cost 700 12 pences, 700 English yards will cost 700 16 p. 685 00 English ells will cost 700 20 pences, and 700 French aulns will cost 700 times 2 s.

If one yard, or ell do cost 40 d. or 3 s. 4 d. one neil will cost 40 quarter far.

If one Gallon do cost 3 s. 4 d. half a pinte will cost 40 quarter farthings.

If 1 pound of Averdupois weight cost 3 s. 4 d. 1 ounce will cost 40 quarter far.

If one pound Irish be 15 s. sterling, 90 0 li. Irish is 9000 times 15 s. sterling.

If one pound Flemish be 12 s. sterling, 700 Flemish is 700 times 12 s. sterling.

All such as are ingenious (who are not partiall in their judgments) may plainly perceiue (by these few examples foregoing) that the Book is of such singular use for Expedition, as that the excellency thereof, cannot be sufficiently exprest; Thus commending my Labours to the Blessing of God, and thy favourable acceptation, I rest

Thine, in any farther service (for Christ)

to be commanded,

RICHARD HODGES.

Although (Christian Reader) thou maist perceive  
 in the Page aforegoing, that I had fully ended the for-  
 mer Addition; yet since (having taken notice of some  
 things, which (I do well know) will make the Book  
 far more easie, and expeditious, than it was before) I  
 have thought it good (though it be with pains & cost)  
 to make a second Addition: commending it also with  
 all my other Labours to the Blessing of God, and thy  
 favourable acceptation, and still resting

*Thine, in any farther service*

*(for Christ) to be commanded,*

RICHARD HODGES.

TO ALL SVCH AS  
DEAL IN ACCOMPTS,

who are desirous to improve their  
short time to the best advantage,  
the Authour wisheth all  
furtherance.

Onsidering (Christian Reader) how  
short our time is, what great cause  
have we to spare as much thereof as  
possibly wee may from our worldly employ-  
ments, to the end we may more freely employ  
our selves in the use of all holy meanes, for the  
examining of our deceitfull hearts, and the  
casting up of our spirituall accompts, (so as  
thereby we may gain the peace of a good con-  
science, and the assurance of eternall life) and  
the rather, because there is not onely a neces-  
sity lies upon us for the doing of it, but also  
the work is so great, and the hindrances there-  
of are so many, that when we have done our  
best we are but unprofitable servants? As a  
speciall help for the sparing of much time  
which may be a great furtherance thereunto)  
doe present unto thee this little Booke, con-

*To all such as deal in Accompts.*

taining therein all sorts of sums, so truly cast up, and after so plain a maner, that thou maist suddenly know thereby the true value of any commodity at any price whatsoever, and how to resolve multitudes of difficult questions (which are necessary to be knowne) without any use of Multiplication or Division, after such an infallible way (in divers plain and familiar examples, which I refer thee unto at the end of the Book) as may give thee sufficient satisfaction to beleve the truth thereof; also whosoever thou beest that art ingenious, if thou diligently perusest this Book (forasmuch as all the summes thereof are set downe after such a decimall maner, as the like hath not bin done before by any) thou maist plainly perceive that it is far more usefull than may conveniently be exprest in writing. Furthermore, (Christian Reader) whereas I promised long since to publish such a Book as might bee a speciall help for the true reading and writing of English (whereof so many thousands are ignorant) I give thee to understand that I purpose (so soon as I shal have a fit opportunity) to make good my promise. In the mean time commending this work (wherein I have taken no small pains) to the blessing of God and thy favourable acceptance, I rest

Thine in any farther service (for Christ)  
to be commanded

RICHARD HODGES.

## In laudem Authoris & Operis.

**I**F to Admire were to Commend thy worth,  
Thy pains should ne'er need praise to set thee forth;  
But since I know for praise thou dost not looke,  
My Muse sends her Encomiums to thy Booke,  
And tells the Reader that th' Epitome  
Of the whole Art is here extract by thee:  
True is the Title then, & it may well  
Be call'd of Millions a Manuell:  
I wish that Millions may by this reape gaines,  
And then th' art paid for thy industrious paines:  
So may these former profits driue thee on  
To frame some second Enchiridion.

FRANCISCVS OWEN Philomedic.

---

## To the Author.

**T**Hy first was wrote for Childrē, this for Men,  
Both glean the gains frō thy industrious Pen:  
That taught the learner this the learned teacheth,  
And to each weakest apprehension reacheth:  
Thou hast a third I heare; why let'st it lye?  
Will women teach exact Orthographie?  
Send it likewise into the World, and so  
Both Fathers, Mothers Children teach to know.

M. I. Philomathematic.

S. P. D. Authori.

**H**ENCE Criticks hence, this booke makes no account  
 Of your vnde censures; for they doe surmount  
 All number: and besides, the Authors pain  
 Soly desires the Courteous Readers gain.  
 A Manuell'tis but styl'd; yet comprehends  
 Millions of profits for his worthy friends,  
 And whosoe're thy Treatise takes in hand  
 By such direction (Hodges) may command  
 Thousands, thereby enriching learnings store,  
 Sooner by farre then he that writeth more.  
 No farther praise thou need'st; this Enchiridion  
 Henceforth will vindicate thee from oblivion.

G. I. Philomus.
